

Case Study: Radiculopathy

I had been having severe numbness and weakness in my low back for a number of months, and after having several failed steroid shots my Doctor said that I needed surgery or I would wind up in a wheelchair. I listened, and scheduled the surgery.

In the meantime, I remembered that years ago my wife had some back pain that did well with a type of treatment called Spinal Decompression, and that's how I found Thrive. On my first visit, the doctor listened to my problems and asked me what I wanted to achieve. I told him that if anything was possible I'd love to not have surgery. He took x-rays, and explained how the shape of my spine was creating the problem. The Spine Surgeon never mentioned that.

The doctor recommended a treatment plan and we proceeded. Literally two weeks after beginning care I was happy to call and cancel my surgery, I knew at that time I was on the right path. That was over two years ago. I am so glad that I came to Thrive and didn't just take my surgeon's word for it.

Complaints

- Shooting Pain Down Legs
- Loss Of Strength
- Lowers Back Pain

Solution

- Spinal Decompression
- Spinal Alignment
- CBP Protocol

Results

- Back To Fishing
- Can Move Freely
- Back To Caring For His Wife

Doctor's Story

Larry came to our office after having severe lumbar spinal pain for weeks. He told us that he was a caregiver to his terminally-ill wife and was having difficulties taking care of her even with a hired caregiver around. Larry was at a point that he couldn't even walk from his living room to his kitchen to get a cup of coffee without sitting down. Larry had even scheduled surgery 30 days out from our first visit.

After reviewing his x-rays it was determined she had 39.2mm forward head posture along with a 72% loss of his cervical curve, as well as a 47.1% loss of his lumbar curve.

So far Larry has reduced his forward head posture by 46% and increased his lumbar curve by 20%. More important than the numbers, is that Larry was able to cancel his lumbar spinal surgery just weeks after beginning care. He was able to walk about the house freely and became more involved with the care of his wife.

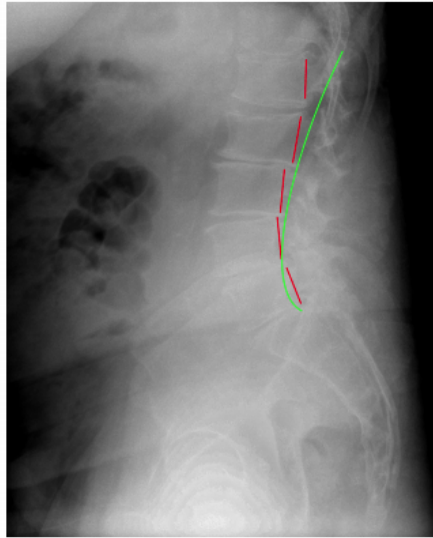

Every Patient Is Different. This Is Not A Guarantee Of Results. You may get better or worse results depending on a variety of variables.
